1. ______________________ of Yale University set out to examine the idea of ____________ to authority and produced some disturbing findings.
   a. Milgram’s primary theoretical basis for his study was that humans have a tendency to obey other people who are in a ________________________________ over them even if, in obeying, they violate their personal codes of __________ ________________ behavior.

2. Describe the complex method of the experiment as succinctly as you can.
   a. What were the four “commands” the experimenter would repeat if an individual tried to stop or exhibited a need for guidance?

3. What percentage of participants did Yale University senior psychology majors and colleagues of Milgram predict would go all the way to administer the highest voltage? What percentage actually did administer the highest voltage?

4. How did researchers alleviate the concern that some participants might suffer psychological distress from the experiment?

5. Milgram’s discussion of his findings focused on two main points. The first was the surprising __________ of the participant’s tendency to obey. The second key observation was the extreme ________________________________ manifested by the participants as they obeyed the experimenter’s commands.

6. What was one criticism of Milgram’s research?

7. Which of the recent applications of Milgram’s experiment did you find the most interesting? Explain why.
